Workshop: PV and Storage for Cheapest Emission Free Electricity

Africa may have been a relative late mover in the global energy transition towards emission free electricity supply. However due to rapidly dropping costs, the modular nature of PV and storage facilities and the smartness of the local private and public sector Africa will soon be among the fastest growing markets for these technologies. The session will highlight the key drivers for local and regional solar developments.

Are you?</p> <p>When it comes to reducing energy costs while also improving security of supply for your industrial production facilities in Sub-Saharan Afrika, clean power from photovoltaic systems is already the best choice. Knowing the complexity of your individual daily business under country specific conditions, this message might however sound hypocritical. The Project Development Programme (PDP) constantly</p>
